Free, cool, easy-to-use

Very nice. I saw it in a tutorial and used it as a basic enemy before I moved onto my own. Really helped me to keep going in my project, being able to...

Script para captura de tarjeta

```
using UnityEngine;
using System.IO;

public class CaptureTarjeta : MonoBehaviour
{
    [Header("Configuracion")]
    public int width = 256;
    public int height = 192;
    public string fileName = "tarjeta.png";

    [Header("Opciones")]
    public bool transparentBackground = false;
    public Color backgroundColor = new Color(0.04f, 0.04f, 0.10f, 1f);

    [ContextMenu("Capturar Tarjeta")]
    public void Capturar()
    {
        Camera cam = GetComponent<Camera>();

        if (transparentBackground)
        {
            cam.clearFlags = CameraClearFlags.SolidColor;
            cam.backgroundColor = new Color(0, 0, 0, 0);
        }
        else
        {
            cam.clearFlags = CameraClearFlags.SolidColor;
            cam.backgroundColor = backgroundColor;
        }

        RenderTexture rt = new RenderTexture(width, height, 24);
        cam.targetTexture = rt;

        Texture2D screenShot = new Texture2D(width, height,
            transparentBackground ? TextureFormat.RGBA32 : TextureFormat.RGB24, false);

        cam.Render();
        RenderTexture.active = rt;
        screenShot.ReadPixels(new Rect(0, 0, width, height), 0, 0);
        screenShot.Apply();

        cam.targetTexture = null;
        RenderTexture.active = null;
        Destroy(rt);

        byte[] bytes = screenShot.EncodeToPNG();

        string folder = Path.Combine(Application.dataPath, "..", "TarjetasAR");
        if (!Directory.Exists(folder)) Directory.CreateDirectory(folder);

        string path = Path.Combine(folder, fileName);
        File.WriteAllBytes(path, bytes);

        Debug.Log($"Guardado en: {path}");
    }
}
```

Este Script se coloca en la cámara

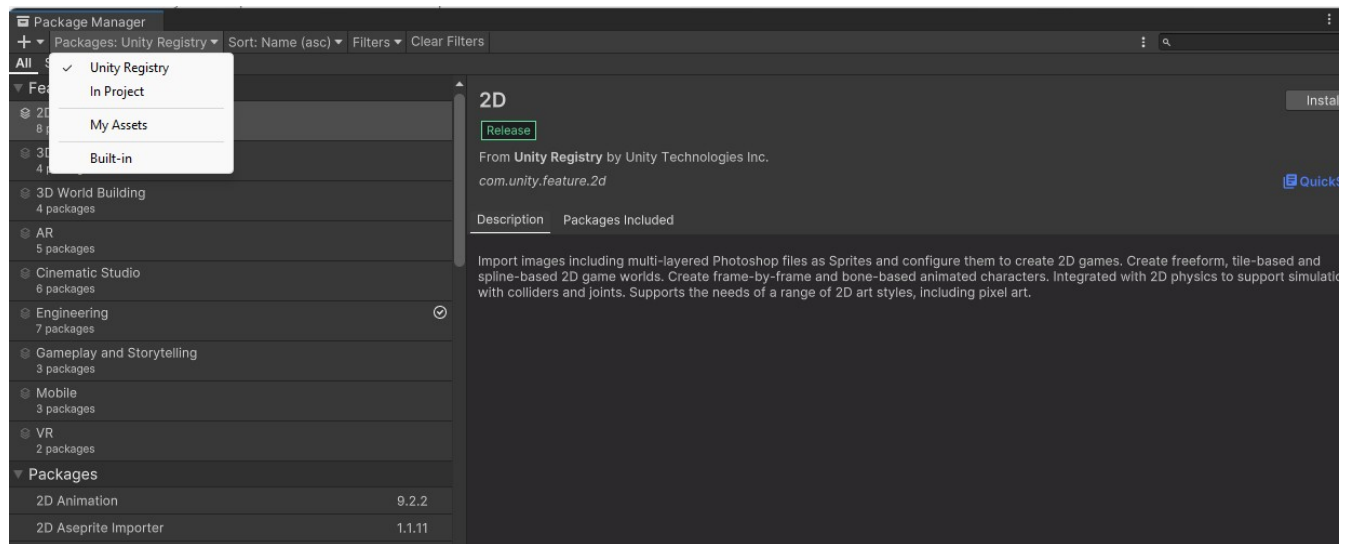

Para ejecutar el Script

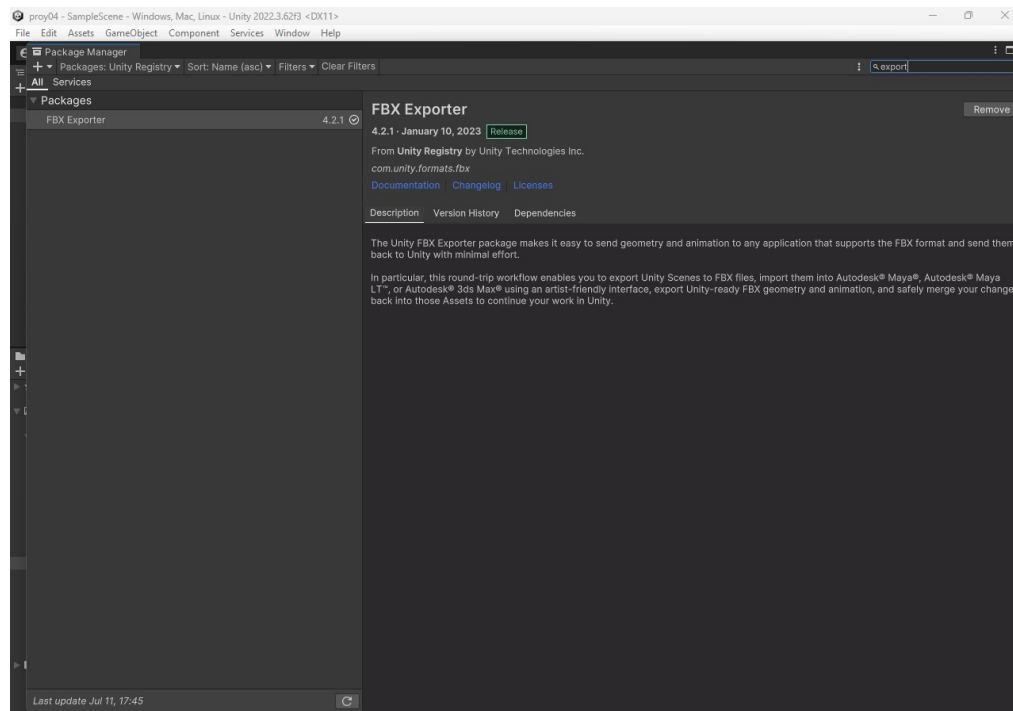

Primero se captura un dragón y después el otro

Platform binaries

Check the [latest release](#) for the last precompiled binaries for Linux, macOS, and Windows.

- Linux x86_64: [FBX2glTF-linux-x86_64.zip](#)
 - It is built on Ubuntu 20.04 and requires glibc 2.31 or newer.
- macOS x86_64: [FBX2glTF-macos-x86_64.zip](#)
 - It should work fine for macOS ARM64 too using Rosetta 2.
- Windows x86_64: [FBX2glTF-windows-x86_64.zip](#)
 - Requires [Microsoft Visual C++ Redistributable](#).

There are also artifacts of the latest commit for Linux, macOS, and Windows in the [GitHub Actions](#) tab.
